PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience building scalable web applications using the MERN stack (MongoDB, Express.js, React.js, and Node.js). Proficient in developing responsive user interfaces, designing RESTful APIs, integrating databases, and delivering end-to-end solutions. Experienced in modern JavaScript, TypeScript, API integration, authentication, and component-based architecture. Passionate about writing clean, maintainable code and building high-performance applications that deliver excellent user experiences.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML, CSS

Frontend: React.js, React Router, Context API, Bootstrap, Responsive Web Design

Backend: Node.js, Express.js, RESTful APIs, JWT Authentication

Databases: MongoDB, Mongoose, MySQL

Tools & Technologies: Git, GitHub, Postman, Vite, npm, Vitest, VS Code, Chrome DevTools, Vercel

Core Concepts: Data Structures & Algorithms, MVC Architecture, Component-Based Architecture, State Management, API Integration, CRUD Operations, Asynchronous JavaScript

INTERNSHIP EXPERIENCE

Software Developer Intern

Feb 2026 – May 2026

MindMatrix, Bengaluru, India

- Developed a web-based asset management application using React.js, enabling efficient tracking, monitoring, and sharing of inventory records.
- Built reusable, responsive user interface components and implemented client-side routing to improve usability across desktop and mobile devices.
- Designed and implemented CRUD functionality for asset management, ensuring reliable data persistence and seamless user interactions.
- Optimized React state management and component rendering, improving application responsiveness and maintaining consistent UI updates.
- Debugged and resolved application issues related to state synchronization, data persistence, and user workflows, enhancing overall stability and user experience.
- Collaborated in the complete software development lifecycle, including feature implementation, testing, debugging, and deployment using modern development tools.

PROJECTS

QuickDine – Multi-Restaurant Table Booking Platform

- Developed a full-stack restaurant table booking platform supporting three user roles (Customer, Restaurant Owner, and Administrator) with dedicated dashboards and role-based functionality.
- Designed and implemented 18 RESTful API endpoints for authentication, restaurant management, table reservations, booking history, and administrative operations.
- Implemented secure authentication and role-based authorization using JWT, enabling protected routes and secure access control across all user roles.
- Built responsive React interfaces with reusable components, dynamic routing, and efficient state management, delivering a seamless user experience across desktop and mobile devices.
- Integrated Cloudinary and Multer to support secure restaurant image uploads and media management.
- Optimized backend data handling using MongoDB and Mongoose, designing 3 database collections, implementing schema validation, efficient queries, and robust error handling.
- Implemented search and filtering functionality to help users quickly discover restaurants and improve the booking experience.
- Deployed the application on Vercel with production ready environment configuration and API integration.

Gemini AI Clone

- Developed an AI-powered chatbot inspired by Google Gemini with a responsive and interactive React interface.
- Integrated the Google Gemini API to generate real-time responses with typing animations, loading states, and formatted AI output.
- Implemented React Context API to manage chat history, recent prompts, conversation state, and AI responses across the application.

- Built reusable React components including a collapsible sidebar, prompt suggestions, and conversation history for improved user experience.
- Optimized asynchronous API handling and state updates to ensure smooth message sequencing and responsive application performance.

Crypto Price Tracker

- Developed a cryptocurrency tracking application that displays live market prices, market capitalization, trading volume, and other financial metrics.
- Integrated the CoinGecko API to fetch and display real-time cryptocurrency data with efficient asynchronous data handling.
- Implemented real-time search, filtering, and sorting to improve cryptocurrency discovery.
- Built dynamic coin detail pages with React Router featuring interactive price charts and detailed market information.
- Designed a fully responsive user interface using reusable React components to provide a seamless experience across desktop, tablet, and mobile devices.

E-Commerce Platform

- Developed a full-stack e-commerce application featuring product catalog, shopping cart, and order management workflows.
- Built RESTful APIs for products, cart, and user operations, enabling seamless frontend-backend communication.
- Implemented efficient state management and asynchronous data fetching to maintain real-time cart synchronization and responsive user interactions.
- Wrote unit and component tests using Vitest to improve application reliability and maintainability.
- Optimized data-fetching and state update workflows to resolve cart synchronization issues and ensure accurate UI rendering.

EDUCATION

Bachelor of Technology (B.Tech) in Information Science & Engineering

KNS Institute of Technology, Bengaluru, Karnataka | CGPA: 8.0 / 10

2022 – 2026

INTERESTS

Guitar, Movies and Gaming
