Bengaluru, Karnataka, India | roshansharma9379@gmail.com | +91-8884580852 | [linkedin.com/in/roshansharma9379](https://www.linkedin.com/in/roshansharma9379) | github.com/RoshanSharmaCode

PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience building secure, scalable web applications using the MERN stack (MongoDB, Express.js, React.js, and Node.js). Skilled in developing RESTful APIs, implementing JWT-based authentication with HTTP-only cookies, integrating third-party services, and building responsive user interfaces. Strong understanding of MVC architecture, database design, state management, and modern JavaScript, with a passion for writing clean, maintainable, and production-ready code.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML, CSS

Frontend: React.js, React Router, Context API, Tailwind CSS, Bootstrap, Responsive Web Design

Backend: Node.js, Express.js, RESTful APIs, JWT, Cookie-based Authentication

Databases: MongoDB, Mongoose, MySQL

Tools & Technologies: Git, GitHub, Postman, Vite, npm, Vitest, VS Code, Chrome DevTools, Vercel

Core Concepts: Data Structures & Algorithms, MVC Architecture, Component-Based Architecture, State Management, API Integration, CRUD Operations, Asynchronous JavaScript

INTERNSHIP EXPERIENCE

Software Developer Intern

Feb 2026 – May 2026

MindMatrix, Bengaluru, India

- Developed a web-based asset management application using React.js, enabling efficient tracking, monitoring, and sharing of inventory records.
- Built reusable, responsive user interface components and implemented client-side routing to improve usability across desktop and mobile devices.
- Designed and implemented CRUD functionality for asset management, ensuring reliable data persistence and seamless user interactions.
- Optimized React state management and component rendering, improving application responsiveness and maintaining consistent UI updates.
- Debugged and resolved application issues related to state synchronization, data persistence, and user workflows, enhancing overall stability and user experience.
- Collaborated in the complete software development lifecycle, including feature implementation, testing, debugging, and deployment using modern development tools.

PROJECTS

QuickDine | Full-Stack Multi-Restaurant Booking Platform

- Architected a full-stack multi-restaurant booking platform using React.js, TypeScript, Node.js, Express.js, MongoDB, and Mongoose, supporting customers, restaurant owners, and administrators with role-based dashboards.
- Implemented 18 REST API endpoints for authentication, restaurant management, table reservations, booking history, and administrative workflows, enabling secure end-to-end application flow.
- Secured private routes with JWT authentication, HTTP-only cookies, and authentication middleware to enforce role-based access control across customer, owner, and admin accounts.
- Built responsive, reusable UI components with React, Tailwind CSS, React Router, Axios, and TypeScript to deliver a seamless experience across desktop, tablet, and mobile devices.
- Integrated Cloudinary and Multer for secure restaurant image uploads and media management, and tested API workflows with Postman during backend development.
- Designed efficient MongoDB data models with schema validation, optimized queries, robust error handling, and production-ready deployment on Vercel.

E-Commerce Platform | Full-Stack Shopping Experience

- Designed and implemented a full-stack e-commerce application using React.js, Node.js, Express.js, and backend APIs for product browsing, cart management, and order workflows.
- Built RESTful APIs for product, cart, and user operations, enabling smooth frontend-backend communication and real-time state updates.
- Implemented efficient state management and asynchronous data fetching to maintain accurate cart synchronization and responsive user interactions.
- Wrote unit and component tests with Vitest to improve application reliability, maintainability, and UI consistency.

- Refined data-fetching and state update logic to resolve synchronization issues and ensure accurate rendering across the application.

MERN Authentication System | Secure Authentication & Account Recovery

- Engineered a secure MERN authentication system using React.js, Node.js, Express.js, and MongoDB for user registration, login, logout, email verification, and password reset workflows.
- Implemented JWT-based authentication with HTTP-only cookies, protected API routes, and authentication middleware to secure private endpoints and user sessions.
- Built OTP-based email verification and password reset flows using Nodemailer and Brevo SMTP with secure OTP generation, expiration handling, and HTML email templates.
- Designed responsive authentication pages with React, Context API, Tailwind CSS, React Router DOM, and Toast notifications for a smooth user experience across devices.
- Structured the backend using MVC architecture, MongoDB validation, Mongoose models, environment variables, and Postman-tested APIs for maintainable and production-ready development.

Crypto Price Tracker | Real-Time Cryptocurrency Dashboard

- Created a responsive cryptocurrency tracking application using React.js, Vite, JavaScript, React Router, HTML5, and CSS3 to display live market data, coin details, and price trends.
- Integrated the CoinGecko API to fetch real-time cryptocurrency metrics including market capitalization, trading volume, and historical price data with efficient asynchronous handling.
- Built search, filtering, and sorting features to improve cryptocurrency discovery and implemented interactive 7-day price charts for detailed market analysis.
- Designed dynamic coin detail pages and reusable UI components to support a clean, intuitive, and mobile-friendly browsing experience.

EDUCATION

Bachelor of Technology (B.Tech) in Information Science & Engineering	2022 – 2026
<i>KNS Institute of Technology, Bengaluru, Karnataka CGPA: 8.0 / 10</i>
